SUMMARY

Angular engineer with 7+ years who has spent much of that time modernizing and stabilizing production systems — making them reliable enough to ship from with confidence.

Led two AngularJS → Angular migrations in live production environments without downtime, built test coverage from scratch across multiple teams, and tracked down performance problems that crossed both the frontend and backend.

Comfortable owning a problem end to end, whether it's a slow API, a rendering bottleneck, or a codebase ready for a fresh architectural direction.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Investigated an API performance issue impacting the platform's real-time experience — profiled the full stack, identified sequential queries as the root cause, and cut response times by **95%** without changing how the feature worked.
- Diagnosed and resolved a frontend rendering bottleneck on the live trading view — worked through it systematically with the React profiler and achieved **97% faster** initial loads.
- Migrated the backend data layer to **Drizzle ORM** on **Node.js**, introducing a layered architecture with clear separation between validation, business logic, and data access.
- Built test coverage from zero using **Testing Library** and **Playwright**, so the team had a reliable safety net before deploying changes.
- Brought new engineers up to speed by documenting business rules, walking through the codebase, and making sure knowledge was shared across the team.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Migrated a legacy **AngularJS**/CoffeeScript payment system to **Angular**/TypeScript — rebuilt the core POS modules and shipped a successful platform re-launch without disrupting live operations.
- Brought structure to complex multi-step checkout flows using **NgRx** state management, making payment logic easier to reason about, debug, and test.
- Built a comprehensive test suite using **Jest** and **Testing Library**, giving the team confidence to iterate on core payment logic safely.
- Audited and improved accessibility across key screens so the product was fully usable for visually impaired customers.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Designed a browser-based desktop environment in **Angular**/TypeScript from scratch, making architectural decisions early that kept the codebase straightforward to extend as the product grew.
- Set up **Jest** tests and a **GitHub Actions** CI/CD pipeline from day one, giving the team a quality baseline they could rely on from the start.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Led the migration from **AngularJS** to **Angular** while keeping production running — used **Webpack** to run both versions side by side until the transition was complete.

- Built a real-time energy analytics dashboard in **Angular** using **RxJS** to handle live data updates across components, keeping it responsive without introducing a state library.
- Extracted PDF invoice generation into its own **Node.js** microservice on **AWS Lambda**, making it independently deployable and much easier to maintain.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving data accessibility for public-sector users.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: Angular, NgRx, RxJS, Angular Material, Ionic, CapacitorJS, Tailwind CSS, W3C Accessibility

Backend: Node.js, NestJS, Deno, Drizzle ORM, REST APIs, Zod

Databases: PostgreSQL

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Docker
