SUMMARY

Senior Frontend Engineer with 7+ years of experience building web applications with TypeScript, React, Angular, and JavaScript.

Delivered a real-time trading platform prototype in under three weeks, then reduced initial React mount time by 97% through systematic profiling and refactoring.

Experience spans data-rich interfaces, frontend architecture, API integration, automated testing, and cross-functional design collaboration.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Delivered a real-time natural gas trading platform prototype in under **3 weeks** using **React**, **Supabase**, and AI-assisted development for market validation.
- Created a shared **Pencil.dev** workflow for Product and Engineering, aligning implementation with documented design-system artifacts.
- Built a virtualized trading interface with five independently filtered views and infinite scroll using **TanStack Virtual** for large datasets.
- Reduced initial React mount time by **97%** and per-block data-load commits by **94%** through three profiler-led refactor rounds.
- Reduced Products API warm latency by **95.7%** to approximately **132 ms** through request profiling, query parallelization, transaction consolidation, and **PostgreSQL** analysis.
- Integrated frontend and backend APIs by analyzing contracts and introducing an adapter layer that isolated payload transformations during API changes.
- Established automated coverage with **Testing Library** unit tests and **Playwright** end-to-end tests while modernizing service boundaries with **Drizzle ORM** on **Deno**.
- Onboarded engineers by documenting platform business rules and layered architecture, reducing knowledge silos across the team.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a business-critical payment system from **AngularJS** and CoffeeScript to **Angular** and **TypeScript** without disrupting operations.
- Rebuilt core POS modules to improve user experience and performance, enabling a successful product re-launch.
- Implemented **NgRx** feature stores for multi-step checkout and payment flows, making asynchronous orchestration predictable and testable.
- Improved usability across customer workflows by implementing **W3C accessibility** standards.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a modular browser-based desktop environment from scratch with **Angular**, **SOLID**, and Clean Architecture.
- Introduced **Jest**, **GitHub Actions**, and linters to establish automated verification and consistent development standards.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Developed reusable **Angular** components and reactive data visualizations for an electric energy dashboard.
- Completed a zero-downtime **AngularJS to Angular** migration with **Webpack** dual-environment bundling.
- Decoupled PDF generation into an **AWS Lambda** microservice and automated deployments with **GitLab CI**.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: React.js, Next.js, Angular, AngularJS, TanStack Virtual, Tailwind CSS, CSS, Ionic, CapacitorJS, Angular Material

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Amazon S3, Docker
