SUMMARY

Full-Stack Software Engineer with over **7 years** of experience building products with strong frontend ownership across **React**, **Angular**, and **TypeScript**, plus hands-on backend work with **Node.js**, **Deno**, **Supabase**, and **PostgreSQL**.

I've built data-intensive dashboards, delivered product prototypes under tight timelines, and improved performance across both UI and API layers.

I work best in product environments where engineers are expected to own features end to end, balance UX with reliability, and turn complex workflows into usable software.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Delivered a functional prototype for a real-time trading platform in under **3 weeks** using **React**, enabling early market validation in a complex domain.
- Built a data-intensive product browsing experience with **5 independently-filtered blocks**, infinite scroll, and **TanStack Virtual** row virtualization so the UI remained responsive as datasets grew.
- Fixed a critical bottleneck that was hurting the platform's real-time usability, reducing Products API latency from **3010ms** to **132ms** (**-95.7%**).
- Migrated backend data access from the **Supabase** client to **Drizzle ORM** on **Deno**, introducing **Zod** validation, repository boundaries, and the **Unit of Work** pattern for more reliable business operations.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Migrated a business-critical payment flow from **AngularJS/CoffeeScript** to **Angular/TypeScript**, enabling continued product evolution without disrupting day-to-day operations.
- Reworked core POS flows to improve usability and long-term maintainability, while adding automated tests with **Jest** and **Testing Library** to reduce regression risk.
- Implemented **W3C accessibility** support across key screens so the product was more reliable for visually impaired users.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a modular browser-based desktop environment in **Angular/TypeScript**, creating a maintainable foundation for a complex product with multiple workflows.
- Introduced **Jest** and **GitHub Actions** CI/CD workflows, giving the team automated quality checks from the start.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Built reusable dashboard components for real-time energy analytics, giving enterprise users clearer visibility into operational data.
- Led an **AngularJS** → **Angular** migration using **Webpack** to keep the platform stable while modernizing the codebase.
- Developed a PDF generation microservice with **AWS Lambda** and supported **GitLab CI** pipelines, contributing beyond the frontend into automation and delivery workflows.

Universidade de Brasília, Frontend Software Developer

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving public access to government information.

Gera Energia Brasil, Frontend Software Engineer

Feb 2019 – Dec 2019

- Built **Angular** and **PrimeNG** dashboards for enterprise energy-consumption analytics, helping clients monitor and reduce energy costs.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, Software Developer

May 2017 – Jun 2018

- Built an **Angular** SPA for internal military-administration data and contributed to **Java EE** microservices containerized with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript, English

Frontend: React.js, Angular, Next.js, Tailwind CSS, TanStack Virtual, W3C Accessibility, Ionic

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod

Databases: PostgreSQL

Testing: Testing Library, Playwright, Jest, pgTAP, Jasmine

DevOps: Docker, GitHub Actions, GitLab CI, AWS Lambda, Amazon S3

Architecture: Full-stack product development, dashboard design, performance optimization, CI/CD, layered architecture
