SUMMARY

Full Stack Engineer with 7+ years of experience building web applications with TypeScript, React, Angular, and Node.js.

Delivered a real-time natural gas trading platform prototype in under three weeks, then reduced API latency by 95.7% and React rendering time by up to 97% through systematic profiling.

Experience spans trading, global POS, energy dashboards, backend services, automated testing, and API integration.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Delivered a real-time natural gas trading prototype for matching sellers and buyers in under **3 weeks** with **React** and **Supabase**, enabling market validation of core workflows.
- Improved responsiveness in the trading workflow by reducing Products API latency **95.7%** through request profiling, query parallelization, transaction consolidation, and **PostgreSQL** analysis.
- Stabilized frontend development during API changes by introducing an adapter layer that isolated backend response transformations.
- Enabled atomic multi-step trading operations by migrating data access to **Drizzle ORM** on **Deno** and applying layered service boundaries.
- Built a virtualized React trading interface with independently filtered views and infinite scroll using **TanStack Virtual** to support potentially thousands of rows.
- Reduced initial React mount time by **97%** and rendering work during data loads by **94%** through profiler-led refactors.
- Established automated coverage with **Testing Library** unit tests and **Playwright** end-to-end tests.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a payment system in a global scheduling and POS platform from **AngularJS** and CoffeeScript to **Angular** and **TypeScript** without interrupting operations.
- Reduced regression risk in core checkout flows by establishing high test coverage with **Jest** and **Testing Library**.
- Coordinated multi-step checkout and payment flows with **NgRx**, isolating state by POS module for predictable testing and maintenance.
- Implemented **W3C accessibility** standards across key customer workflows so visually impaired users could operate the system.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a modular browser-based desktop environment from scratch with independently developed mini-applications using **Angular**, **SOLID**, and Clean Architecture.
- Introduced **Jest**, **GitHub Actions**, and linters for automated verification.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Completed a zero-downtime **AngularJS to Angular** migration for an electric-energy dashboard with **Webpack** dual-environment bundling.
- Decoupled PDF generation for invoice workflows into an **AWS Lambda** microservice and automated deployments with **GitLab CI**.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving public access to government information.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built **Angular** and **PrimeNG** dashboards for enterprise energy-consumption analytics, helping clients monitor and reduce energy costs.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Built an **Angular** SPA for internal military-administration data and contributed to **Java EE** backend systems using **Docker** and microservices architecture.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript, Java

Frontend: React.js, Next.js, Angular, AngularJS, TanStack Virtual, Ionic, CapacitorJS, Tailwind CSS, Angular Material

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod, Java EE

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: Docker, GitHub Actions, GitLab CI, AWS Lambda, Amazon S3
