SUMMARY

Senior Angular Fullstack Engineer with 7+ years of experience modernizing and stabilizing production Angular applications.

Led two AngularJS → Angular migrations without downtime, established test cultures across multiple teams, and resolved production incidents by profiling full-stack bottlenecks from REST APIs to frontend rendering.

Strong TypeScript and RxJS foundations, Node.js integration experience, and a track record of reducing technical debt safely in pressured production environments.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Resolved a critical API bottleneck threatening the platform's real-time viability — cut response times by **95%** through backend profiling, **EXPLAIN ANALYZE** query analysis, and parallelization on **Node.js** and **PostgreSQL**.
- Eliminated a rendering bottleneck that made the trading interface unusable under live data — achieved **97% faster** initial loads through three rounds of React 18 profiler analysis and targeted refactors.
- Modernized the backend architecture by migrating from a tightly coupled client library to **Drizzle ORM** on **Node.js**, introducing a layered architecture with **Zod** validation, use cases, and isolated repositories.
- Enabled confident deployments by building automated test coverage from scratch with **Testing Library** unit tests and **Playwright** E2E regression tests.
- Accelerated new engineers' time-to-productivity through structured onboarding sessions, business rule documentation, and guided walkthroughs of critical platform areas — reducing knowledge silos and shared ownership gaps.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a business-critical payment system from **AngularJS/CoffeeScript** to **Angular/TypeScript** — rebuilding core POS modules to eliminate technical debt and enabling a successful platform re-launch without disrupting live operations.
- Introduced **NgRx** state management with dedicated feature stores per POS module, coordinating multi-step checkout and payment flows through **effects and actions** — making async orchestration predictable and testable.
- Established automated test coverage with **Jest** and **Testing Library**, reducing regression risk on core checkout and payment flows and enabling safer future changes.
- Implemented **W3C accessibility** standards across key user-facing screens, making the platform operable for visually impaired users.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a browser-based desktop environment in **Angular/TypeScript** using **SOLID** principles and Clean Architecture, delivering a modular codebase designed for long-term maintainability.
- Established automated quality gates with **Jest** unit tests and a **GitHub Actions** CI/CD pipeline from the project's start, improving team confidence in every deployment.
- Configured linters and enforced code quality standards, ensuring consistency as the team scaled.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Led a zero-downtime **AngularJS** → **Angular** migration using **Webpack** dual-environment bundling — keeping production stable throughout and unblocking new feature development after years of accumulated technical debt.
- Built a real-time energy analytics dashboard in **Angular** using **RxJS** observable streams for live data updates and reactive component coordination without a dedicated state library.
- Deployed a PDF generation microservice on **AWS Lambda (Node.js)** integrated into the core invoicing flow, decoupling a critical business function and streamlining release cycles.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving data accessibility for public-sector users.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: Angular, NgRx, RxJS, Angular Material, Ionic, CapacitorJS, Tailwind CSS, W3C Accessibility

Backend: Node.js, NestJS, Deno, Drizzle ORM, REST APIs, Zod

Databases: PostgreSQL

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Docker
