SUMMARY

Software Engineer with 7+ years of experience building web applications with Angular, TypeScript, React, and Node.js.

Current Full Stack Engineer delivering a natural gas sales platform with API integration, PostgreSQL performance optimization, layered backend architecture, and automated testing.

Led production AngularJS-to-Angular migrations without interrupting operations and decoupled invoice PDF generation into an AWS Lambda microservice.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Delivered a natural gas sales platform prototype in under **3 weeks** using **React** and AI-assisted development, enabling validation of core seller-buyer connection and notification workflows.
- Integrated frontend and backend APIs during an API structure migration by introducing an adapter layer that isolated response transformations from most frontend layers.
- Resolved a critical Products API bottleneck by profiling request execution and PostgreSQL queries, reducing warm latency by **95.7%** through query parallelization and transaction consolidation.
- Enabled atomic multi-step sales operations by migrating data access to **Drizzle ORM** on **Deno** and introducing validation, use-case, repository, and Unit of Work boundaries.
- Designed a virtualized sales interface with five independently filtered views and infinite scroll using **TanStack Virtual** to support potentially thousands of rows without performance degradation.
- Established automated quality coverage with **Testing Library** unit tests and **Playwright** end-to-end tests.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a business-critical payment system from **AngularJS** and CoffeeScript to **Angular** and **TypeScript** without interrupting operations.
- Reduced migration risk by integrating legacy and modern systems during the transition and validating migrated components with **Jest** and **Testing Library**.
- Coordinated multi-step checkout and payment flows with **NgRx**, isolating state by POS module for predictable testing and maintenance.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a modular browser-based application with independently developed mini-applications using **Angular**, **SOLID**, and Clean Architecture principles.
- Established **Jest** tests, **GitHub Actions** CI/CD workflows, and linters as a foundation for consistent application development.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Completed a zero-downtime **AngularJS-to-Angular** migration using **Webpack** dual-environment bundling, enabling module-by-module modernization in a production energy dashboard.
- Decoupled invoice PDF generation into an independently deployable **AWS Lambda** microservice and automated deployments with **GitLab CI**.
- Built Angular energy-data dashboards and launched an **Ionic** mobile application for invoice payment and data monitoring.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving public access to government information.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built **Angular** and **PrimeNG** dashboards for enterprise energy-consumption analytics, helping clients monitor and reduce energy costs.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Built an **Angular** SPA for internal military-administration data and contributed to **Java EE** microservices containerized with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: Angular, AngularJS, React.js, Next.js, RxJS, Ionic, CapacitorJS, NgRx, Tailwind CSS, Angular Material, TanStack Virtual

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod, Java EE

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Amazon S3, Docker

Architecture: REST API integration, Microservices, Layered architecture, Unit of Work, Incremental application migration
