SUMMARY

Senior Frontend Engineer with 7+ years of experience building scalable, performant web applications using React, Next.js, and TypeScript.

Delivered a real-time gas trading platform prototype in under 3 weeks, eliminated an API bottleneck cutting response times by 95%, and resolved a UX-breaking rendering issue achieving 97% faster loads — shipping an AI-driven operational platform in a fast-moving startup.

Type-safe, architecture-minded engineer with hands-on experience in Drizzle ORM, Zod, TailwindCSS, and PostgreSQL-backed systems — comfortable owning features from database to UI.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Validated product-market fit by delivering a fully functional real-time gas trading platform in under **3 weeks** — using **React** and AI-assisted development to accelerate to market before full-scale investment.
- Resolved a UX-breaking rendering bottleneck on the live trading interface, achieving **97% faster** initial loads and eliminating rendering overhead on real-time market data through React 18 Profiler analysis.
- Eliminated an API bottleneck threatening the platform's real-time viability, cutting response times by **95%** through **PostgreSQL** query optimization and `Promise.all` parallelization.
- Designed the core operational view to handle large datasets without degrading performance — using **TanStack Virtual** row virtualization and infinite scroll across five independently-filtered data blocks.
- Modernized the backend architecture by migrating to **Drizzle ORM** on **Deno**, introducing **Zod** validation at the API layer, layered architecture, and transactional support via Unit of Work pattern.
- Established automated test coverage with **Testing Library** unit tests and **Playwright** E2E tests, enabling the team to ship changes confidently.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Delivered a successful re-launch of a SaaS payment platform by migrating a business-critical system from **AngularJS**/CoffeeScript to **TypeScript**, improving reliability and enabling continued product evolution.
- Implemented **NgRx** state management for complex multi-step checkout and payment flows — isolating state boundaries across POS modules and making async orchestration predictable and testable.
- Established automated test coverage with **Jest** and **Testing Library** on core checkout flows, reducing regression risk on critical user paths.
- Implemented **W3C accessibility** standards across key user-facing screens, making the product fully operable for visually impaired users.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a browser-based desktop environment from scratch using **TypeScript**, **SOLID** principles, and Clean Architecture, delivering a maintainable modular codebase.
- Established automated quality gates with **Jest** unit testing and **GitHub Actions** CI/CD pipeline from project inception.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Developed reusable dashboard components for real-time energy analytics using **RxJS** observable streams as a lightweight reactive state layer — enabling live data updates across components.
- Executed a zero-downtime **AngularJS** → **Angular** migration using **Webpack** dual-environment bundling, maintaining production stability throughout.
- Built a serverless PDF generation microservice on **AWS Lambda** integrated into the core invoicing workflow.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving data accessibility for public-sector users.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: React.js, Next.js, TailwindCSS, Angular, TanStack Virtual, NgRx, Angular Material, Ionic, CapacitorJS

Backend: Node.js, Deno, Drizzle ORM, Zod, Supabase, NestJS

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Amazon S3, Docker
