SUMMARY

Full Stack Engineer with 7+ years of experience building web applications, including recent end-to-end product work with React, APIs, backend architecture, and PostgreSQL.

Reduced a production API's warm response time by 95.7% and React page mount time by 97% through measured performance improvements.

Additional cloud experience includes an AWS Lambda microservice; Python exposure includes a Django web application and a RAG pipeline using scikit-learn and NumPy as personal projects (about two months each). English proficiency is Full Professional.

EXPERIENCE

GasHub, **Full Stack Engineer**

Jun 2025 – Present

- Delivered a real-time natural gas sales prototype with React and Supabase in under **3 weeks**, enabling business validation of core seller-buyer workflows.
- Reduced Products API warm latency by **95.7%** to approximately **132 ms** through profiling, query parallelization, transaction consolidation, and PostgreSQL optimization.
- Reduced React page initial mount time by **97%** (59.1 ms to 1.8 ms) and per-block data-load commits by **94%** through profiler-led refactors.
- Enabled atomic multi-step operations by migrating data access to **Drizzle ORM** on **Deno** and introducing validation, use-case, repository, and Unit of Work layers.
- Integrated frontend and backend APIs by analyzing contracts and adding an adapter layer that isolated payload transformations during API structure migration.
- Established automated quality coverage with **Testing Library** unit tests and **Playwright** end-to-end tests.

MyTime, **Frontend Software Engineer**

Apr 2022 – Mar 2025

- Modernized a payment system in a global scheduling and POS platform from **AngularJS** and CoffeeScript to **Angular** and **TypeScript** without interrupting operations.
- Achieved high test coverage using **Jest** and **Testing Library**, reducing regression risk on core checkout flows.
- Coordinated multi-step checkout and payment flows with **NgRx**, isolating state by POS module for predictable testing and maintenance.
- Implemented **W3C accessibility** standards across key customer workflows so visually impaired users could operate the system.

Twenty20 Solutions, **Frontend Software Engineer**

Jan 2022 – Mar 2022

- Architected a modular browser-based desktop environment with independently developed mini-applications using **SOLID** principles and Clean Architecture.
- Introduced **Jest** unit tests and **GitHub Actions** CI/CD quality gates.

GreenAnt, **Frontend Software Engineer**

Jan 2020 – Dec 2021

- Decoupled invoice PDF generation into an **AWS Lambda** microservice and automated deployments with **GitLab CI**, separating a critical workflow from the main application.
- Completed a zero-downtime AngularJS-to-Angular migration for an electric-energy dashboard using Webpack dual-environment bundling.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving public access to government information.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built **Angular** and **PrimeNG** dashboards for enterprise energy-consumption analytics, helping clients monitor and reduce energy costs.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Built an **Angular** SPA for internal military-administration data and contributed to **Java EE** microservices containerized with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript, Python (personal projects)

Frontend: React.js, Angular, Next.js, Ionic, Tailwind CSS, NgRx, TanStack Virtual

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod, Java

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: AWS Lambda, Amazon S3, GitHub Actions, GitLab CI, Docker
