SUMMARY

Senior Frontend Engineer with 7+ years of experience building web products that scale — from payment platforms to real-time trading tools.

Most recently shipped a gas trading platform prototype in under 3 weeks, then improved it: API response times down 95%, page load times down 97%, and a codebase the team could confidently build on.

I care about writing frontend that holds up as products grow — working closely with product and design, owning features end-to-end, and solving real problems instead of just shipping code.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Brought a real-time gas trading platform to market in under **3 weeks**, giving the team a working product to test assumptions with real users before committing to full-scale development.
- Improved rendering performance on the live trading interface, reducing load times by **97%** through systematic profiling and targeted optimizations.
- Resolved an API performance issue on the core product listings, cutting response times by **95%** through query and architecture improvements.
- Built the core product browsing experience to stay fast as data volumes grew — designed for scale from the start to support future growth without a costly rebuild.
- Refactored the backend to support complex multi-step operations reliably — introduced proper transaction handling, input validation, and a clean structure that made the codebase easier to extend.
- Set up automated tests across the application so the team could confidently ship new features without causing regressions.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized the payment platform to **TypeScript**, enabling a successful re-launch and giving the team a stable foundation to keep evolving the product.
- Rebuilt the state management for complex checkout and payment flows, making them more predictable and easier to maintain as the product grew.
- Built a test suite covering the most critical checkout flows, giving the team confidence to make changes without causing regressions.
- Made the product fully usable for people with visual impairments by implementing accessibility standards across key screens.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a browser-based desktop environment from scratch — designed for modularity to keep the codebase maintainable as the product scaled.
- Set up automated testing and a CI/CD pipeline from day one, giving the team a quality baseline to build on.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Built a real-time energy analytics dashboard with reusable components, making it straightforward to extend as the product evolved.

- Migrated a production app from a legacy framework to a modern stack without any downtime — ran both versions in parallel during the transition to keep things stable.
- Extracted PDF generation into a standalone service, decoupling it from the main app and making it independently deployable.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving public access to government information.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built **Angular** and **PrimeNG** dashboards for enterprise energy-consumption analytics, helping clients monitor and reduce energy costs.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Built an **Angular** SPA for internal military-administration data and contributed to **Java EE** microservices containerized with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: React.js, Next.js, TailwindCSS, Angular, TanStack Virtual, NgRx, Angular Material, Ionic, CapacitorJS

Backend: Node.js, Deno, Drizzle ORM, Zod, Supabase, NestJS

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Amazon S3, Docker
