SUMMARY

Frontend Software Engineer with 7+ years of experience building reliable, data-rich web applications with TypeScript, React, and Angular.

Delivered a real-time natural gas trading prototype in under 3 weeks using React and AI-assisted development, then improved its rendering performance by 97% through profiling and architectural refactors.

Experienced in building systems from scratch, integrating frontend and backend services, and establishing testing and quality practices that support fast, safe delivery.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Delivered a real-time natural gas trading prototype in under **3 weeks** using **React** and AI-assisted development, enabling early validation of complex business workflows.
- Designed a data-rich trading interface with five independently filtered blocks, infinite scroll, and **TanStack Virtual**, keeping large datasets usable without a costly retrofit.
- Resolved a rendering bottleneck that threatened live-data usability, reducing initial React mount time by **97%** and per-block data-load commits by **94%** through profiler-led refactors.
- Removed a critical API bottleneck affecting real-time workflows, cutting response latency by **95.7%** through request profiling, query parallelization, and PostgreSQL optimization.
- Established a maintainable quality baseline with **Testing Library** unit tests and **Playwright** end-to-end tests, while modernizing service boundaries with **TypeScript**, **Deno**, and **Drizzle ORM**.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a business-critical payment system from **AngularJS** and CoffeeScript to **Angular** and **TypeScript**, improving maintainability while keeping operations uninterrupted.
- Reduced regression risk in core checkout flows by establishing high test coverage with **Jest** and **Testing Library**.
- Improved usability and reach across key customer workflows by implementing **W3C accessibility** standards.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a browser-based desktop environment from scratch with **Angular**, **SOLID**, and Clean Architecture, establishing a modular foundation for independently developed mini-applications.
- Introduced **Jest** tests and **GitHub Actions** quality gates, making automated verification part of the development workflow from the start.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Completed a zero-downtime **AngularJS** → **Angular** migration with **Webpack** dual-environment bundling, keeping production stable while enabling faster feature delivery.
- Decoupled PDF generation into an **AWS Lambda** microservice and automated deployments with **GitLab CI**, improving release independence for a core invoicing workflow.

Universidade de Brasília, Frontend Software Developer

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving data accessibility for public-sector users.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: React.js, Next.js, Angular, AngularJS, TanStack Virtual, Ionic, CapacitorJS, Tailwind CSS, Angular Material

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Amazon S3, Docker
