SUMMARY

Software Engineer with 7+ years of experience modernizing JavaScript applications with JavaScript, TypeScript, Angular, and React.

Migrated legacy AngularJS and CoffeeScript systems to modern Angular and TypeScript through incremental strategies that preserved production continuity.

Experience includes Webpack-based application upgrades, npm monorepo dependency linking, migration troubleshooting, automated testing, and cross-team technical coordination.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Delivered a real-time natural gas trading platform prototype in under **3 weeks** using **React** and AI-assisted development for market validation.
- Used an **npm monorepo** with linked dependencies between packages to support shared package development.
- Stabilized frontend development during API changes by introducing an adapter layer that isolated backend response transformations.
- Resolved a critical backend bottleneck by profiling requests and queries, reducing Products API warm latency by **95.7%**.
- Diagnosed React rendering bottlenecks through profiler-led refactors, reducing initial mount time by **97%** and per-block data-load commits by **94%**.
- Modernized backend data access by migrating from the Supabase JS client to **Drizzle ORM** on **Deno** and introducing layered service boundaries.
- Established automated coverage with **Testing Library** unit tests and **Playwright** end-to-end tests.
- Documented business rules and technical architecture and led onboarding to reduce knowledge silos across the team.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a business-critical payment system from **AngularJS** and CoffeeScript to **Angular** and **TypeScript** without interrupting operations.
- Reduced migration risk by integrating legacy and modern systems during the transition and validating migrated components with **Jest** and **Testing Library**.
- Improved maintainability and reliability across core payment workflows through incremental modernization and automated testing.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a modular browser-based application from scratch using **Angular**, **SOLID**, and Clean Architecture principles.
- Established **Jest** tests, **GitHub Actions** CI/CD workflows, and linters as a foundation for consistent application development.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Completed a zero-downtime **AngularJS-to-Angular** migration using **Webpack** dual-environment bundling.

- Adapted legacy **AngularJS** library integrations for **Webpack** by evaluating module and package compatibility, enabling older dependencies to coexist with modern **Angular** code during the migration.
- Enabled module-by-module modernization by running legacy and modern Angular code together while keeping the production application operational.
- Automated deployments with **GitLab CI**, supporting repeatable delivery during the migration.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: JavaScript, TypeScript

Frontend: Angular, AngularJS, React.js, Next.js, RxJS, Ionic, CapacitorJS, Tailwind CSS

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: Webpack, GitHub Actions, GitLab CI, Docker, AWS Lambda

Architecture: Incremental application migration, JavaScript ecosystem modernization, npm monorepo, dependency linking, Clean Architecture
