SUMMARY

Full Stack Engineer with 7+ years building web applications, with recent end-to-end work across TypeScript, React, Node.js, Deno, PostgreSQL, and Angular.

Modernized a business-critical payment system from AngularJS and CoffeeScript to Angular and TypeScript without interrupting operations, and delivered a real-time trading prototype in under three weeks.

Reduced warm API latency by 95.7%, enabled atomic multi-step operations, and built data-rich interfaces that remain responsive across large datasets.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Delivered a real-time natural gas trading platform prototype in under **3 weeks** using **React** and **Supabase** for market validation.
- Reduced warm API latency by **95.7%** through request profiling, query parallelization, transaction consolidation, and **PostgreSQL** optimization.
- Enabled atomic multi-step operations by migrating data access to **Drizzle ORM** on **Deno** and introducing layered validation, business, and data-access boundaries.
- Built a data-rich trading interface with five independently filtered views, infinite scroll, and row virtualization using **TanStack Virtual** to handle potentially thousands of rows without performance degradation.
- Stabilized frontend delivery during API structure changes by introducing an adapter layer that isolated backend response transformations.
- Reduced initial React mount time by **97%** and per-block data-load commit time by **94%** through systematic profiler-led refactors.
- Established automated quality coverage with **Testing Library** unit tests and **Playwright** end-to-end tests.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a business-critical payment system from **AngularJS** and CoffeeScript to **Angular** and **TypeScript** without interrupting operations.
- Made multi-step checkout and payment flows predictable and testable by introducing **NgRx** feature stores, effects, and actions.
- Reduced regression risk in core payment workflows by establishing high test coverage using **Jest** and **Testing Library**.
- Improved customer workflow usability and accessibility by implementing **W3C** standards across key screens.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a modular browser-based application from scratch using **Angular**, **SOLID**, and Clean Architecture principles.
- Established **Jest** tests, **GitHub Actions** CI/CD workflows, and linters as a foundation for consistent application development.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Completed a zero-downtime **AngularJS-to-Angular** migration using **Webpack** dual-environment bundling.

- Kept older dependencies compatible during gradual modernization by evaluating module and package constraints and adapting AngularJS library integrations for **Webpack**.
- Built an energy analytics dashboard in **Angular** using **RxJS** for live data updates across reusable components.
- Decoupled invoice PDF generation into an **AWS Lambda** microservice and automated deployments with **GitLab CI**.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: Angular, React.js, Next.js, NgRx, RxJS, TanStack Virtual, Ionic, CapacitorJS, Angular Material, Tailwind CSS

Backend: Node.js, NestJS, Deno, Drizzle ORM, Supabase, Zod, Java EE

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: AWS Lambda, Amazon S3, GitHub Actions, GitLab CI, Docker, Webpack

Architecture: Layered Architecture, Clean Architecture, Unit of Work, API integration
