SUMMARY

Angular engineer with 7+ years who has spent much of that time working on systems that were too fragile to change — and making them reliable enough to ship from.

Led two AngularJS → Angular migrations in live production environments without downtime, built test coverage from scratch across multiple teams, and tracked down production problems that crossed both the frontend and backend.

Comfortable owning a problem end to end, whether it's a slow API, a broken UI, or a codebase that nobody wants to touch.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Tracked down an API slowdown that was making the platform feel broken — profiled the full stack, found sequential queries as the root cause, and cut response times by **95%** without changing how the feature worked.
- Fixed a rendering issue that made the live trading view unusable when real data came in — worked through it systematically with the React profiler and got initial loads **97% faster**.
- Cleaned up a backend that was tightly coupled to a single SDK — migrated to **Drizzle ORM** on **Node.js** and introduced a proper layered architecture with validation and clear separation between business logic and data access.
- Built test coverage from zero using **Testing Library** and **Playwright**, so the team had a safety net before deploying changes.
- Brought new engineers up to speed by documenting business rules, walking through the tricky parts of the codebase, and making sure knowledge wasn't stuck with one person.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Took over a payment system written in **AngularJS** and CoffeeScript that the team was afraid to change — migrated it to **Angular/TypeScript**, rebuilt the core POS modules, and shipped a re-launch without disrupting live operations.
- Brought structure to complex multi-step checkout flows using **NgRx** state management, making payment logic easier to reason about, debug, and test.
- Built test coverage where there was almost none, using **Jest** and **Testing Library** — so the team could change payment logic without constantly worrying about breaking something.
- Audited and improved accessibility across key screens so the product was usable for visually impaired customers.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Designed a browser-based desktop environment in **Angular/TypeScript** from scratch, making architectural decisions early that kept the codebase straightforward to extend as the product grew.
- Set up **Jest** tests and a **GitHub Actions** CI/CD pipeline from day one, giving the team a quality baseline they could rely on from the start.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Led the migration from **AngularJS** to **Angular** while keeping production running — used **Webpack** to run both versions side by side until the transition was complete.
- Built a real-time energy analytics dashboard in **Angular** using **RxJS** to handle live data updates across components, keeping it responsive without introducing a state library.

- Extracted PDF invoice generation into its own **Node.js** microservice on **AWS Lambda**, making it independently deployable and much easier to maintain.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**, improving data accessibility for public-sector users.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: Angular, NgRx, RxJS, Angular Material, Ionic, CapacitorJS, Tailwind CSS, W3C Accessibility

Backend: Node.js, NestJS, Deno, Drizzle ORM, REST APIs, Zod

Databases: PostgreSQL

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: GitHub Actions, GitLab CI, AWS Lambda, Docker
