SUMMARY

Senior Software Engineer with 7+ years of experience building web applications, with recent backend work across TypeScript, Node.js, Deno, Drizzle ORM, and PostgreSQL.

Established layered backend architecture with transaction support, reduced API latency by 95.7%, and delivered a real-time trading platform prototype in under three weeks.

Experience includes complex business workflows, financial-adjacent systems, automated testing, AWS Lambda, CI/CD, monorepos, and end-to-end technical ownership.

EXPERIENCE

GasHub, Full Stack Engineer

Jun 2025 – Present

- Enabled atomic multi-step business operations by migrating data access to **Drizzle ORM** on **Deno** and introducing layered validation, use-case, repository, and Unit of Work boundaries.
- Cut Products API warm latency by **95.7%** through request profiling, parallelizing independent queries, consolidating transactions, and **PostgreSQL** query-plan analysis.
- Reduced the risk of vendor lock-in by decoupling business rules from **Supabase**-specific abstractions, creating a more portable backend foundation.
- Delivered a real-time natural gas trading platform prototype in under **3 weeks** using **React** and AI-assisted development for market validation.
- Stabilized API evolution by analyzing backend contracts and introducing an adapter layer that isolated response transformations from frontend application layers.
- Supported shared package development with an **npm monorepo** and linked dependencies between packages.
- Established automated quality coverage with **Testing Library** unit tests and **Playwright** end-to-end tests.
- Documented complex business rules and backend architecture and onboarded engineers to reduce knowledge silos across the team.

MyTime, Frontend Software Engineer

Apr 2022 – Mar 2025

- Modernized a business-critical payment system from **AngularJS** and CoffeeScript to **Angular** and **TypeScript** without interrupting operations.
- Made multi-step checkout and payment flows predictable and testable by introducing **NgRx** feature stores, effects, and actions.
- Reduced regression risk in core payment workflows by establishing high test coverage with **Jest** and **Testing Library**.
- Improved usability across customer workflows by implementing **W3C accessibility** standards.

Twenty20 Solutions, Frontend Software Engineer

Jan 2022 – Mar 2022

- Architected a modular browser-based application from scratch using **Angular**, **SOLID**, and Clean Architecture principles.
- Established **Jest** tests, **GitHub Actions** CI/CD workflows, and linters as a foundation for consistent application development.

GreenAnt, Frontend Software Engineer

Jan 2020 – Dec 2021

- Decoupled invoice PDF generation into an **AWS Lambda** microservice and automated deployments with **GitLab CI**.

- Completed a zero-downtime **AngularJS-to-Angular** migration using **Webpack** dual-environment bundling.
- Launched a mobile application for invoice payment using **Ionic** and **CapacitorJS** across Android and iOS.

Universidade de Brasília, **Frontend Software Developer**

Aug 2018 – Aug 2020

- Developed a mobile-first government data dashboard using **Angular** and **Next.js**.

Gera Energia Brasil, **Frontend Software Engineer**

Feb 2019 – Dec 2019

- Built data-intensive energy management dashboards with **Angular** and **PrimeNG**.
- Set up automated testing with **Jasmine** and a CI/CD pipeline for continuous delivery.

Finatec, **Software Developer**

May 2017 – Jun 2018

- Developed frontend features in **Angular** and contributed to Java microservices containerised with **Docker**.

EDUCATION

B.S. in Computer Science

Universidade de Brasília

2014 – 2022

SKILLS

Languages: TypeScript, JavaScript

Frontend: React.js, Next.js, Angular, Ionic, CapacitorJS, NgRx, Tailwind CSS, TanStack Virtual

Backend: Node.js, NestJS, Deno, Supabase, Drizzle ORM, Zod

Databases: PostgreSQL, pgTAP

Testing: Jest, Testing Library, Playwright, Jasmine

DevOps: AWS Lambda, Amazon S3, GitHub Actions, GitLab CI, Docker, Webpack

Architecture: Layered Architecture, Clean Architecture, Unit of Work, API Integration, Scalability
